Description

- Deep knowledge of Java and the Android SDK
- Experience with platform versions from 8 (Gingerbread) to 19 (KitKat)
- Familiar with many libraries: Support Library, Play Services, Facebook SDK, GSON, OrmLite, Holo Everywhere...
- Updated on the newest programming/design patterns and best practices
- Passionate about experimenting with complex UI/UX design and implementation, and the constant challenge of pushing the boundaries of the framework
- IDE: Intellij Idea / Android Studio (preferred), Eclipse

Some published Android projects I have developed or contributed to:

Tethering Fixer
- Polished interface and engaging user experience despite the technical use
- Extensive use of the Property Animation Framework
- Modularisation of code with a MVVM pattern approach and full XML styling
- Event-driven asynchronous callback system to eliminate every perceived lag
- Managing shell commands with root permission
- Completely open source

Dreamboard Mobile
- Design and development of app based on client request
- Use of features unique to newer versions of Android (ex. rich notifications, animations) with fallbacks and optimizations for older versions
- User interface made with Fragments to achive DRY (Don't Repeat Yourself)
- Implementation and customisation of libraries for managing XMPP (chat) protocol, asynchronous JSON user data synchronization with Drupal server and database abstraction by using Annotations as to avoid direct SQL queries
- Coordination with team working on iOS version

SocialDance
- Design and development of custom UI component (calendar) following customer specifications
- Refactoring (cleanup and optimization) of existing Java code, with special care about getting the UI as close as possible to provided mockups
- Refactoring of existing image resources, to better handle HD screens
- Various optimizations for old Android versions

ShareItApp
- Partial interface development and bugfixes

Experience

2011 - today

Android developer (freelance and hired)

Development of third-party apps and libraries with the Android SDK, either for publishing on the Play Store or internal use, with great care about performance, design and maintainability.

2007 - today
Developer (freelance)
Various types of tasks, for example:
- Development of custom online management software plus Android app to remotely access data, provide business contacts and show realtime reports through a widget.
- Design and realization of archive system based on professional scanner and integrated printing of adhesive QR code labels.
- Management and optimization of PostgreSQL database to reduce response time of most complex queries.

2007 - today
Designer/Photographer (freelance)
Various types of tasks, for example:
- Logo creation with relative business card / letterhead.
- Design and realization of animated closing credits for a horror short movie.
- Filming and editing professional wedding video in HD, using tools such as slider and steady-cam.

Education

2001 - 2006
High School Diploma (scientific/technologic)
International European School "Altiero Spinelli", Turin (Italy)

Skills

Ability to learn and adapt quickly.
Great precision in organizing and developing work, with experience in leading every stage of project lifecycle either in team or individually.
Used to explain technical subjects and interact with non-technical people.

Programming: Java, C#, Javascript/CoffeeScript, Ruby, Php, C
Web: Html/HAML, CSS/SASS, Sinatra, Ruby on Rails, Node.js, Drupal
Graphics/animation: Photoshop, Illustrator, Lightroom, After Effects, Premiere
Database: SQL (PostgreSQL, SQLite,MySQL), NoSQL (MongoDB)
Version control: Git
OS: OSX, Linux, Windows
Other: Android, Sublime Text, Trello
